Education

B.Tech Electronics and Communication Engineering with CS

July 2023 – May 2027

Jaypee Institute of Information Technology, Noida

7.4 GPA

Class X (92.3%) | Class XII (86.2%)

2020 | 2022

Gurukul Academy School, Lucknow | H.A.L School, Lucknow

Work Experience

GenAI Intern | Bharat Electronics Limited

Ghaziabad | May 2026 – Present

- Designed and built an **Agentic AI system** using **LangChain** and **Python**, implementing autonomous agents with multi-step reasoning, tool use, and memory to automate internal workflows.
- Integrated **multi-agent orchestration** with **OpenAI/Anthropic** APIs, engineering modular prompt templates, reusable tool pipelines, and evaluation scripts following industry-standard Git workflows.

Data Science Intern | Deepneura

Bangalore | June 2025 – Aug 2025

- Developed and deployed **RESTful APIs using Python** and **Flask** to automate financial report generation from structured inputs, processing client data into multi-page analytical outputs.
- Built an AI-powered report generation system that produced comprehensive custom 30-page financial analysis documents from client data inputs, automating a process that previously required 8-10 hours of manual work.

Projects

WealthPortal | [Link](#)

- Engineered a **wealth management platform** that helps users track investments, monitor portfolio's live performance, and receive AI-generated financial insights.
- Designed a secure database architecture to manage user portfolios, transactions, and holdings data with role-based access controls and multi-layered authentication.

AutoAssist | [Link](#) | [Dataset](#)

- Developed an AI-powered **car recommendation chatbot** that helps users find suitable vehicles based on their preferences, budget, and requirements through bilingual conversational queries.
- Created and published a structured dataset of **700+ Indian cars models** on Kaggle with **60 features per vehicle**, improving recommendation accuracy and response quality.

Financial Transaction Classification | [Link](#)

- An intelligent AI-powered **transaction categorization tool** that automatically classifies financial entries into 8 categories with 97% accuracy.
- Built a full-stack solution utilizing Python and the Hugging Face Transformers library (DistilBERT) for high-accuracy text classification.

Skills

- **Programming Languages:** JavaScript, Python, C++, C, HTML, CSS
- **Backend & Frameworks:** Node.js, FastAPI, FlaskAPI, React.js, Express.js
- **Security Concepts:** JWT Authentication, Rate Limiting, SQL Injection Prevention
- **Databases & Caching:** PostgreSQL, Redis (caching & job queues), Qdrant (vector DB), SQL schema design
- **Data Structures & Algorithms:** Arrays, Strings, Binary Search, Hashing, Sliding Window, Trees, Basic DP
- **DevOps & Tools:** Git, GitHub, Docker (familiar), VS Code, Google Cloud Platform
